The agricultural dilemma : how not to feed the world / Glenn Davis Stone, London ; New York : Routledge, Taylor & Francis Group ; [London] : earthscan from Routledge, 2022, xiv, 232 Seiten : Illustrationen, Earthscan food and agriculture, ISBN: 978-1-032-26047-1 (hardback)

Inhalt: "In this book an ecological anthropologist, who has studied farming systems from small-scale African hoe cultivators to industrial American agribusiness, provides a new analysis of population and agricultural growth. This book argues that we can't make sense of population and food production without recognizing the drivers of three fundamentally different types of agriculture. It identifies and explores these three fundamental forms of agricultural growth: Malthusian (expansion), industrialization (external-input-dependent) and intensification (labour-based). Synthesizing findings from historical and scientific research, the book upends entrenched misconceptions such as that we are running out of land for food production, that our only hope is development of new agricultural technologies, that new technologies are developed mainly in response to food demands, and that such technologies saved a billion lives when they were brought to India and the developing world. Containing vignettes, short histories and drawing on global case studies, this book will not only be of interest to students and scholars of agriculture, land management and development, but also those more widely interested in learning about agri-food systems and the challenges of feeding a growing population"--

Doing economics : what you should have learned in grad school - but didn't / Marc F. Bellemare, Cambridge, Massachusetts ; London, England : The MIT Press, [2022], xii, 191 Seiten

Signatur: 40 921 a - c

Global food security : what matters? / Zhang-Yue Zhou, London ; New York : Routledge, 2020, xxii, 270 Seiten : Diagramme, Routledge textbooks in environmental and agricultural economics, ISBN: 978-1-138-22279-3 (paperback)

Inhalt: "This book looks at food security from a socio-economic perspective. It offers a detailed and systematic examination of food security from its historical backgrounds, concepts and measurements, to the determinants and approaches to achieve food security. The book also introduces the key challenges and root causes of food insecurity. Through country-specific cases, the book highlights instances of both successful and disastrous national food security management and their outcomes. The invaluable learning experiences of these countries shed light on food security practices, and the straightforward demand-supply framework effectively guides readers in understanding food security issues. This is an essential resource for anyone who is keen to learn more about food security, particularly researchers and university students who are new to the field. The book endeavours to help us reflect on the current phenomenon and strategize better for the future"--
