Göttinger Talk on

»SECURITY AND TRUST IN THE INFORMATION SOCIETY«

Location: Lichtenberg-Kolleg, Alte Sternwarte · February 23, 2010 · 16 - 18 h s.t.

Programme

Presentation
Volkmar Lotz, Research Program Manager Security & Trust, SAP Research
»**Towards Secure and Trustworthy Service-based Value Networks**«
Value Networks can only hardly be conceived without open and flexible IT infrastructures and technologies that facilitate spontaneous collaboration across organisational domains while providing the required control of business processes and protection of assets. In this talk, we investigate into the achievement of these objectives by reviewing the protection needs, discussing the related security paradigm shift, and introducing recent research results to meet the related challenges, including security models, policies, privacy-preserving computing, security indicators and business process controls.

Panel discussion
preceded by short statements by further panelists
Jacques Bus, Head of Unit, European Commission,
DG Information Society and Media
